

Story 10b. SEARCH WORK ORDERS

As a user known by the system

I want to search all registered work orders by team

WIREFRAMES:

The wireframe shows a dark gray rectangular container. At the top, centered, is the title "Search Work Order" in a light gray font. Below the title is a large, empty rectangular area. Within this area, on the left, is the text "Team Name" in a light gray font. To the right of "Team Name" is a white rectangular input field. Below the input field is a white rectangular button with the word "Search" in a light gray font. The entire form is enclosed in a dashed white border.

ACCEPTANCE CRITERIA:

- There is a Search Work Order page, with an input field for a team.
- If the name is filled in and it matches with existing work orders, the Search Result page is shown with all details from the matched work orders.
- If the name is filled in and it doesn't match any existing work order, the Search Result page is shown with a message that there isn't a matching work order.
- If no team is filled in, the form is shown again with an error message (server-side validation)
