

## Story 07a. SEARCH PROJECTS

As a user know by the system

I want to search all registered projects by name

### WIREFRAMES:

The wireframe shows a dark gray rectangular container. At the top, centered, is the text "Search Project" in a light gray font. Below this, there is a dashed rectangular border. Inside this border, on the left, is the text "Project Name" in a light gray font. To the right of "Project Name" is a white rectangular input field. Below the input field, centered, is a light gray rectangular button with the text "Search" in a darker gray font.

### ACCEPTANCE CRITERIA:

- There is a Search Project page, with an input field for a name.
- If the name is filled in and it matches an existing project, the Search Result page is shown with all details from the matched project.
- If the name is filled in and it doesn't match an existing project, the Search Result page is shown with a message that there isn't a matching project.
- If no name is filled in, the form is shown again with an error message (server-side validation)
