

Story 02a. EDIT USER

As a user know by the system
I want to able to edit a user

WIREFRAMES:

The wireframe shows a dark gray background with a title bar at the top that says "Edit user" in white. Below the title bar is a large dashed rectangular box containing the form. Inside the box, at the top, is the text "Please fill in all input fields." in white. Below this text are four input fields: "Last Name" with the value "Johnson", "First Name" with the value "Andrew", "Email" with the value "director@ucll.be" and a circular refresh icon on the right, and "Team" with a dropdown menu showing "Alpha" and a downward arrow. At the bottom of the dashed box is a button labeled "Edit user".

ACCEPTANCE CRITERIA:

- In the User Overview, there is a Edit symbol visible besides every registered user
- When the form is show, all current values are filled in
- All fields are editable, except userId and password
- The email should remain unique
- If Edit is Successful, Home page is shown and User is edited
- If not, the form is shown again with an error message (server-side validation). Correct values are preserved. Others are replaced by original values.
